

Special Issue

Hierarchy Microstructures and Phase Transformations in Metallic Alloys

Message from the Guest Editors

This Special Issue is dedicated to presenting the current status and progression of knowledge on multi-scale characterization from the atomic to nanoscale dimensions as well as multiscale modelling of processing-microstructure-property/performance relation of metallic alloys such as steels, high entropy alloys, Ni-base alloys, light alloys. To obtain a further understanding of microstructural evaluation and phase transformation during deformation and thermal cyclic, including 3D printing, fast heating, cooling, solidification etc., a great number of scientific researches have been performed on microstructure characterization and modelling to an efficient materials and heat treatments design and optimization. Significant progress has been achieved in both experiments and modellings to describe the evolution of size, distribution, volume fraction, partitioning of alloying elements in the nucleation, growth, coarsening of phase transformation, especially with the help of Large-Scale Facilities (LSF) and high end of computational tools used for pioneering research in materials science.

Guest Editors

Dr. Ziyong Hou

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
