

Special Issue

Advances in Impulse Manufacturing

Message from the Guest Editor

Metalworking using a high strain rate can benefit many aspects of manufacturing and provide solutions to numerous challenges within the industry. For example, impact welding technologies such as vaporizing foil actuator welding enable the joining of dissimilar materials without significant structural modifications. Electromagnetic forming is another example, not requiring direct contact with the workpiece while extending the forming limits of several materials. This Special Issue is devoted to addressing the recent development of impulse-based manufacturing technologies such as impact welding, impulse forming, and shock peening by means of explosives, electromagnetic fields, vaporizing foils, and pulsed lasers. Research articles are expected to either report on the state-of-the-art applications of impulse manufacturing or contributing to the understanding of their associated fundamental principles. Original research articles and reviews are welcome, and I look forward to receiving your contributions.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
