Special Issue

Treatment of Liquid Metal and Its Relationship with Cast Properties

Message from the Guest Editors

Casting is an effective method for producing components in many industrial sectors, including automotive, aerospace, and other attractive industries. However, if the quality of a melt is not properly controlled, then the result is defect-containing cast parts. Further improvements could be obtained via process control, alloy development, and numerical simulation. Recent trends in metal casting and the requirement for enhanced qualities suggest that additional developments are desired. Demands for answering the foundry concerns encourage researchers to offer a comprehensive outlook on the metal casting industry and to contribute extensively. The aim of this Special Issue is to highlight recent innovations introduced in the fields of treatment of liquid metal and, from a wider perspective, on its relationship with cast properties. Scholars are thus encouraged to submit research papers dealing on specific aspects of treatment of molten metal or describing the response of metals and alloys by experimental techniques and/or modelling/numerical simulation. Submissions of works that correlate process parameters with final casting properties are strongly encouraged.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang
Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
