Special Issue

Advanced Machining of Aerospace Materials

Message from the Guest Editors

The aerospace industry is continuously immersed in processes of innovation and improvement of manufacturing processes. In recent years, the use of advanced materials, such as composites, light alloys, or superallovs, with their excellent properties and relatively low weight, have allowed the reduction of energy consumption, improving the sustainability of the manufacturing. However, some properties of these materials can make them difficult to machine, decreasing process performance. In particular, the combination of materials with very different natures shows high complexity during machining processes. The necessity to comply with rigorous requirements are driving the use of non-conventional machining techniques based on emerging technologies. The main objective of this Special Issue is to publish outstanding papers presenting cutting-edge advances in the field of advanced machining of aerospace materials.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
