Special Issue

Machining and Finishing of Nickel and Titanium Alloys

Message from the Guest Editors

Dear Coleagues, Nickel and titanium alloys are hightemperature resistant alloys, essential in many applications. However, these materials are also characterized by their low machinability. With the aim of dealing with this drawback, new machining and finishing processes are being developed. They enable optimized component shapes, surface finishing and surface integrity for specific applications. Problems related to machining of components of nickel and titanium alloys are far from being solved. New cooling systems, tools and tool's coatings, new abrasive processes and strategies are being investigated deeply. In addition, friendly and sustainable processes are including in the workshops. The aim of this Special Issue is to highlight recent advancements related to machining and finishing of nickel and titanium based alloys mainly for aeroengine components. Machines, processes, assisted processes and new tools are now in a rapid evolution.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
