

Special Issue

Mechanical Properties of Stainless Steel

Message from the Guest Editors

In recent years, the so-called lean duplex steels, which, thanks to chemical composition optimisation, can be cheaper, while maintaining high mechanical properties and corrosion resistance. Many applications require both wear and corrosion resistance, and this is where martensitic grades are used. Their wide range of material properties makes stainless steels more widely used in virtually every area of life and industry. This Special Issue will address the phenomena related to stainless steels' mechanical properties. This Issue's scope is extensive, providing the possibility to present developments and research in all aspects of this field, and includes various processes causing changes in the mechanical properties of stainless steels, such as heat treatment, surface treatment, thermomechanical treatment, and forming and joining methods. The influence of service conditions (heat, creep, thermal shock, fatigue, erosion, wear, corrosion, etc.) on the microstructural changes and mechanical properties' alteration will also be addressed.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
