

Special Issue

Mesoscale Simulations for AM Alloys

Message from the Guest Editor

The special issue will focus on advances in computational approaches, data-driven approaches, and the use of high-performance computing platforms to address the challenges involved in simulating processing-microstructure-property linkages in AM alloys. Specifically, this topic will focus on the following topics: (1) simulating the solidification microstructures and solid-state phase transformations that occur under thermal conditions typical of AM processes for structural, multi-component alloys using either laser or e-beam sources using realistic AM process thermal boundary conditions, (3) post-process heat treatments to optimize structure for meeting specific property requirements, and (4) mesoscale simulations of mechanical response of AM microstructures using crystal plasticity based approaches. The overall goal is to quantify how changes in AM process parameters and/or changes in local cross-sections in an AM component can affect the local microstructure and the local mechanical properties.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2025).
