

Special Issue

Advances in Modeling and Analysis of Additive Manufactured Materials

Message from the Guest Editor

Parallel with the technological advances in additive manufacturing, the interest to be able to predict the mechanical properties of additive manufactured components progressing. As several process variables influence the additive fabrication process, establishing a straightforward method to characterize the material properties has not been easy. Recent focus has been on using experimental methods, which is expensive. Analytical approaches to describe the mechanical responses as a function of the performance parameters a mechanical or structural system is also limited due to the diversity of the manufacturing variables. As a result, modelling and analysis methods such as application of finite element methods seem to be viable though the approaches are still under progressive development. This special issue intends to serve as a platform where recent research advances on modelling and analysis of additive manufactured materials, including polymers, composites and metallic materials, are disseminated and shared. The special issue will accommodate both original research articles and critical reviews.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
