

Special Issue

Study of the Formation of Oxides Layers on Alloy Surfaces and at the Oxide-Matrix Interfaces

Message from the Guest Editors

Ti-based alloys are very promising materials for technological applications in many fields, because of their excellent combination of mechanical properties. The poor high-temperature oxidation resistance of these alloys restricts their application. The enhancement of the alloy oxidation and hot corrosion resistance, while maintaining their excellent mechanical properties, is of considerable interest. This Special Issue is focused on the theoretical and experimental studies of oxide scale formation on Ti-based alloys, oxygen diffusion and the formation of intermediate layers at the oxide-matrix interface, as well as the influence of impurities on these processes. Reviews, original articles, and short communications in the area of computer simulation of the surface and interface properties of Ti-based alloys, including the electronic structure, oxygen diffusion, and self-diffusion characteristics; moreover, experimental investigations into the evolution of surface and interface structures and their physical-mechanical properties under oxidation or loading are welcomed.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
