Special Issue

Phase-Field Modeling of Damage Fracture

Message from the Guest Editors

The phase-field fracture model, which is among smeared approaches for damage, has shown great potential in predicting arbitrary crack paths in solids. In this Special Issue, we would like to invite you to share your findings in application of the PF fracture model in one or more of the following directions: modeling brittle, cohesive, and ductile fractures; fatigue and lifetime prediction; modeling of interphase; anisotropic and mixed-mode fracture in solids (e.g., crystalline materials, etc.); and multiphysics environment (e.g., considering chemical reaction and/or thermal influence, martensite phase transformation, and hydraulic fracturing, etc.). Moreover, discussion on new multiscaling techniques, including the PF fracture; fundamental studies on the concept of internal length scale and experimental calibration of the model; and numerical treatment and implementations (novel solvers, machine learning techniques for speedup, etc.) are highly encouraged. Finally, qualitative, and quantitative comparisons of the PF fracture against other methodology, such as gradient extended damage models (GED), extended FEM, peridynamics, Eigenerosion, mixed FEM, etc. is of great interest.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang
Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
