

Special Issue

Powder Metallurgy of Steels and Alloys

Message from the Guest Editor

The high-precision forming capability of powder metallurgy generates components with near net shape and complex features, and pieces with good dimensional precision are often finished without the need of machining. PM process enables manufacturers to make products that are more consistent and predictable in their behaviour across a wide range of applications. In addition, the PM process has a high degree of flexibility, allowing the tailoring of the physical characteristics of a product to suit specific property and performance requirements. The purpose of this Special Issue is to highlight the latest developments in the shaping of sintered materials. Researchers are invited to present all their original scientific and technical papers with a theoretical and experimental character on a wide range of materials and processes, including classical “press-and-sinter” powder metallurgy as well as other innovative shaping methods such as metal injection molding, hot isostatic pressing, metal additive manufacturing, mechanical alloying, and spark plasma sintering.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2025).
