

Special Issue

Radiation Damage and Irradiation-Assisted Stress Corrosion Cracking of Metallic Materials for Reactor Applications

Message from the Guest Editor

Most light water reactors (LWRs) of the existing fleet worldwide are expected to continue operation beyond their original operating license for 60–80 years. The reliability of structural materials for core internals is a critical and potentially life-limiting event for LWRs. Irradiation-assisted stress corrosion cracking (IASCC) is the primary degradation mechanism for stainless steel (SS) core internals. However, the detailed underlying mechanisms of IASCC is yet to be elucidated. The purpose of this Special Issue is to explore the radiation damage and radiation effects or the potential factors that influenced irradiation-assisted stress corrosion cracking in nuclear power systems. This Special Issue will cover but not be limited to experimental or simulation efforts (both original research or review articles) that advance our understandings in radiation damage, radiation-induced segregation, radiation-induced/enhanced precipitations, irradiation accelerated/decelerated corrosion, stress corrosion cracking, irradiation-assisted stress corrosion cracking of metallic materials in LWRs, or advanced reactors concepts.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
