Special Issue

Advances in Stability of Metallic Implants

Message from the Guest Editors

Metallic implants play an important role in promoting human health and disease treatment. The stability of metallic implants plays an important role in the clinical performance of medical implants, and have attracted more and more attention from researchers in the last few decades. Significant advances in this field have a close relationship with medicine, biomaterials, numerical simulation, biomaterials preparation and characterization, surface biofunctionalization of the metallic implants, etc. Topics addressed may include, but are not limited to: Computational modelling and numerical simulation of metallic implants; Biofunctionalization of biomaterials to enhance the stability of metallic implants; Metallic design and characterization for medical devices; Surface modification of biomaterials and metallic implants; The interactions between metallic implants and tissue; New fabrication techniques and characterization of the metallic implants; Investigation methods/modeling for metallic implants development; Design, preparation, and characterization of new metallic implants.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez
Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang
Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
