

## Special Issue

# Additive Manufacturing of Advanced Materials: Fabrication, Characterization, and Properties

### Message from the Guest Editors

Additive manufacturing (AM) has evolved from a rapid prototyping technology to a fabrication route that can produce complex end-use parts for critical applications. The design freedom that AM technology offers can open doors for the fabrication of components that do not exist to date and allow design optimization that cannot be fabricated even with expensive machining processes. There is a constant need for the development of advanced materials with mechanical properties superior to the existing ones for several challenging applications. This research topic aims to explore unique strategies in the development of advanced materials via an additive manufacturing route.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.7 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the second half of 2025).
