# Special Issue

# Surface Chemistry and Corrosion of Light Alloys

## Message from the Guest Editor

Light alloys have attracted increasing scientific and technical interest during the last two decades. Corrosion and wear resistance of these alloys is one of the key points that limit its utilization in service. Although, the corrosion of metals begins on a portion of the surface film and then expands due to its breakdown. the influence of surface chemistry is generally considered less relevant than the composition or microstructure of the bulk material on their corrosion behavior. However, any attempt to improve the corrosion resistance of light alloys requires a profound understanding of the relationship between the composition, structure and the protective properties of the surface films and how these relationships are modified by surface and interface engineering or under different environmental factors. This Special Issue addresses the nature of the surface films formed on commercial light alloys, corrosion protection strategies and the changes in their chemical composition induced by exposure to aggressive environments, with the aim of elucidating the protective properties of these films.

## **About the Journal**

## Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

#### Editor-in-Chief

### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

#### **Author Benefits**

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

### **Journal Rank:**

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
