

Special Issue

Innovations in Methane Production from Anaerobic Digestion

Message from the Guest Editor

In view of climate change, the use of renewable energies is a high-priority area of research. Biogas plays an important role in this field as a renewable energy source that can generate energy from organic residues and waste. The expansive development of technology to enhance the efficient use of substrates, among other things, is crucial in this regard. Additionally, the development and adaptation of technologies to the specific conditions at each location is a fundamental criterion. We cordially invite researchers to contribute novel, pioneering research on the theme of "*Innovations in Methane Production from Anaerobic Digestion*" to support these critical developments.

Guest Editor

Dr. Benedikt Hülsemann

State Institute of Agricultural Engineering and Bioenergy, University of Hohenheim, D-70599 Stuttgart, Germany

Deadline for manuscript submissions

15 June 2026

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25.9 days after submission; acceptance to publication is undertaken in 7.8 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
