Message from the Guest Editors

Dear Colleagues,

Considering the future demands that the lifetime of organs and tissues exceed that of human life, various tissue engineering methods have been developed to create tissue-mimetic structures. The 3D bioprinting method, which utilizes tissue-specific bioink, has been a key player among these methods. Although extensive work has been conducted in 3D bioprinting, the technology is still far behind in creating clinically relevant tissue mimetic structures that can be used to replace or repair damaged tissue or can be used as a model system to study various diseases. The challenges in this area are related to creating cell-loaded high fidelity functional tissue-like structures while preserving cell viability and directing cell fate. Therefore, to address these challenges, this Special Issue focuses on the advances in 3D bioprinting and bioink to create functional tissue-like structures, such as cardiac tissue, liver, kidney, vascular grafts, neural tissue, bone, and cartilage.

Editor-in-Chief

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q2 (*Mechanical Engineering*)
