### Message from the Guest Editors

Dear Colleagues,

Highly flexible and wearable microfluidic devices have great potential for applications in medical screening and diagnostics. The development of wearable microfluidics for the detection of biomarkers in fluids, such as perspiration, interstitial fluid, blood, tears, or saliva, has lagged behind, despite the enormous potential of such systems. Wearable microfluidic devices face unique challenges due to the need to interface to the body and/or collect fluid samples for analysis, driving some researchers to investigate technologies such as mechanically flexible and textile-based approaches. This Special Issue will focus on the development of flexible and wearable microfluidic-based devices and systems for a broad range of applications that may include personalized medicine, athletics, worker safety, and environmental monitoring and comfort.

an Open Access Journal by MDPI

## Editor-in-Chief

## Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

**Journal Rank:** JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)
