and Computer Engineering, The  
University of Western Australia,  
Perth, WA 6009, Australia

Deadline for manuscript  
submissions:

**30 June 2024**

### Message from the Guest Editors

Dear Colleagues,

Memristors have shown much promise as a solution for processing-in-memory architectures due to its non-volatile memory retention, high density, low power, nanoscale geometry, and so on. With ongoing advances in material science and device physics, physically derived and empirically based memristor models have broadened the ways in which we may design, simulate, and test exotic computing systems and architectures. Furthermore, integrating memristors with modern CMOS processes technology has expanded the spectrum of research on memristive crossbar arrays, digital logic circuits, and inmemory processors, which play an important role in neuromorphic computing systems, novel computing architectures and dynamical memristive networks.

The purpose of this Special Issue is to provide a comprehensive overview of memristor fabrication, characterization, and modeling; memristor crossbar arrays, memristor logic circuit designs, and processing-in-memory architectures; and other circuit or system-level applications that harness the dynamical properties of memristors.

an Open Access Journal by MDPI

## Editor-in-Chief

## Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q2 (*Mechanical Engineering*)
