Molecular Robotics: Synthetic Biology Meets Robotics

Guest Editor:

Dr. Warren C. Ruder

Department of Bioengineering, Swanson School of Engineering, University of Pittsburgh, Pittsburgh, PA 15219, USA

Deadline for manuscript submissions: closed (20 May 2021)

Message from the Guest Editor

Molecular machinery has evolved from catenane-based machines that repeat tasks to molecular robots capable of sorting cargo or producing chemicals. The perceptionaction loop, the ability to sense, analyze, and respond to complex environments, is essential for building autonomous robotic systems. With recent advances in DNA nanotechnology, molecular robots have exploited the sequence-specific structural and functional features of DNA to create actuation, self-assembly, and perception-action behaviors. Apart from base-pairing properties, encoded genetic information in DNA can be used to create autonomous molecular robots. Synthetic biology has developed a variety of genetic circuits inspired by electronic circuits and embedded these in biological systems. Robots at the macroscale and microscale have embraced synthetic biology as their perception-action modules. Similar to this synergy, synthetic biology can provide control circuitry for molecular robots.

This Special Issue will highlight recent advances in the field of molecular robots and present perspectives of further development. Molecular robots integrated with synthetic biology tools are of particular interest.

Editor-in-Chief

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication i n *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases. **Journal Rank:** JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q2 (*Mechanical Engineering*)
