Message from the Guest Editors

Dear Colleagues,

Optofluidics is the study of interactions between light and fluids in the use of either light to control the flow of fluids or fluids to guide the flow of light, particularly at the micro-scale. Specific applications of the former one include optowetting, optical trapping, particle and cell sorting, and nanoparticle assisted optical flow control. Notable applications of the latter one are in waveguides, displays, optical switches, sensors, as well as in lab-on-a-chip, lab-in-fiber, and smart optical devices. In this Special Issue, we invite insight from investigators and scientists in the field to show your work with research papers, short communications, and review articles that focus on the new technology, fundamental research, concept, and application cases in the area of Optofluidics.

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank: JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)
