

Special Issue

Energy Conversion and Storage: From Materials to Devices

Message from the Guest Editor

Conversion and storage of energy are key components of our modern energy landscape. A fast-expanding subject of study is the development of new materials and technology to increase the efficiency and sustainability of these processes. Researchers are aiming to improve these technologies' efficiency and scalability, making them more competitive with traditional fossil fuels.

On the energy storage front, today's demand is to increase the performance of fuel cells, batteries, supercapacitors, and other energy storage technologies by inventing materials and systems. This includes the creation of new electrode materials, electrolytes, and separators with the potential to improve energy density, charge/discharge rates, and overall longevity.

As a result, the goal of this Special Issue, titled "Energy Conversion and Storage: From Materials to Devices," is to present research papers and review articles that highlight the current state of research as well as the most recent developments in the electrode materials and devices used in solar cells, batteries, and supercapacitors to maximize energy harvesting and storage.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
