Special Issue

Additive Manufacturing of Materials

Message from the Guest Editors

Additive manufacturing, also known as 3D Printing, dates back to the mid-1980s. The first commercial additive manufacturing machine (SLA-1) was sold in 1988 by 3D Systems. Since then, the research results of thousands of researchers and engineers who are in love with 3D printing have found their way into the fields of aircraft engineering, rocket science, propulsion systems, medical products, microcircuits, the food industry, etc. Additive technologies have made it possible to create parts of a new, more complex shape that could not be made using traditional production methods (stamping, molding, milling and casting) from polymers, ceramics and metals. Research into improving the properties of materials already in use, as well as introducing completely new materials into additive technologies is of particular importance as a pillar of further development as a response to the current economic needs of rapid and low-cost manufacturing. This Special Issue is the right place to present current needs and opportunities for future improvements or new materials for additive manufacturing.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
