

Special Issue

Beyond Moore's Law: Hardware Specialization and Advanced System on Chip

Message from the Guest Editor

As the continuous scaling and miniaturization of transistors, the Moore's Law has been guiding the semiconductor industry over 50 years, making modern ICs faster and smaller, less power dissipation, and cheaper to manufacture. Though the Moore's Law is coming to an end due to the physical limitation, there is no doubt about the continuation of performance improvement for computing in a variety of other areas. Typical examples include purpose-built architectures such as Google tensor processing unit, and application-specific designs such as Nervana's AI architecture, Facebook's Big Sur, and Microsoft's FPGA (field-programmable gate array) Configurable Cloud. Accordingly, this Special Issue seeks to showcase research papers and review articles that focus on advanced SoC architectures and specialized designs for various applications including but not limited to FPGA acceleration on neural networks, software-hardware co-design with FPGA, ASIC implementation with high-level synthesis, high abstract level design with HCL (hardware construction language), novel verification methods/methodologies, energy-efficient SoCs, custom IP designs, etc.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Nam-Trung Nguyen

Queensland Quantum and Advanced Technologies Research Institute,
Griffith University, West Creek Road, Nathan, QLD 4111, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
