Special Issue

Biologically Inspired Sensor and Actuator (BioSA) Platforms

Message from the Guest Editor

The basic understanding of in-vivo sensing/actuating mechanisms inspires novel ideas to addressing challenges in various life science applications including point-of-care disease diagnostics (PoCD), environmental monitoring, automation of biological and chemical laboratories, pharmacological and food industries and etc. This special issue shall consider the publication of research or review papers papers that address the challenge of developing Biologically Inspired Sensor and Actuator (BioSA) systems such as nanopore DNA sequencers or micr-robots respectively. BioSA is a multidisciplinary research approach to mimick the biological micro-environments using standard Integrated Microelectronic Circuitsuch as complementary metal oxide semiconductors (CMOS), Micro-electromechanical System (MEMS) and Microfluidic techniques. This Special Issue addressing the design, implementation, modeling, characterization, validation, and/or optimization of BioSA platforms consisiting of CMOS, MEMS or Microfluidic devices for bioengineering or biomedical engineering applications such as drug testing or other fundamental biological studies.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu
1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
