Advances in Lithium Metal Anodes for Liquid and Solid Electrolyte-Based Lithium Batteries

Message from the Guest Editor

Lithium metal anodes are currently gaining attention as a next-generation anode material due to their high theoretical capacity. In particular, their theoretical capacity (3860 mAh g⁻¹) of approximately 10 times that of commercialized graphite anodes holds the promise of revolutionizing next-generation batteries. However, lithium metal, unlike graphite, is a hostless material, which poses many challenges as its surface undergoes dynamic changes during charge and discharge processes. The formation of dendrites and complex surface reactions hinder the Coulombic efficiency and cycling performance. Numerous studies have been conducted to overcome these issues, but further research is still needed. Therefore, this Special Issue is designed to focus on advances in lithium metal anodes for liquid and solid electrolyte-based lithium batteries. Researchers are invited to submit their original research in addition to review and perspective articles for this Special Issue. Potential topics include, but are not limited to, the fundamental study, synthesis, and analysis of lithium metal anodes in liquid and solid electrolyte systems.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
