Heat and Light at the Nanoscale: Fundamentals and Applications

Message from the Guest Editor

In recent years, there have been great advances in controlling heat and light using micro- and nanostructures both related to fundamentals and in applications. The strong light-matter interaction at the nanoscale provides versatile ways for tailoring heat and light, with applications ranging from energy conversion, thermal management, communication, and to sensing. Novel control of thermal radiation has been achieved using innovative materials and mechanisms, such as meta-surfaces, 2D materials, quantum materials, epsilon-near-zero (ENZ) materials, phase-change materials, and topological effects as well as machine learning. Numerous breakthroughs have also occurred in the field of near-field radiative heat transfer. There is significant interest in exploring the cold outer space as a thermodynamic resource through radiative cooling. The marriage of optoelectronic devices and nanophotonics points to emerging thermodynamic machines such as thermophotovoltaics and photonic refrigeration. Developing nonreciprocal emitters points to a fundamental pathway for improving energy conversion processes.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
