Special Issue

Microfluidics for Single Cell Detection and Cell Sorting

Message from the Guest Editors

In recent decades, advances in single-cell detection and sorting have emerged as a promising technology to revolutionize a wide range of biomedical applications, including microfluidic fluorescent-activated cell sorting and droplet microfluidics. Their biomedical applications in high-throughput screening and multi-omics will surely encourage even more promise, with new concepts and commercial products continuing to be introduced. This Special Issue spotlights innovative microfluidic technologies, with particular emphasis on their role in the detection, analysis, and sorting of single cells. Specific topics to be covered include, but are not limited to, the following: (1) the latest methodologies in design, fabrication, and modeling of microfluidic chips for cell detection and sorting; (2) the exploration of novel approaches for cell detection, manipulation, and sorting, using a variety of mechanisms; and (3) the application of microfluidic technologies in clinical and biological research, environmental and ecological studies. We invite researchers, academics, and professionals to contribute their work and engage in dialogue with the wider community.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu
1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
