Special Issue

Recent Advances in Implantable Neural Interfaces

Message from the Guest Editor

Implantable neural interfaces may be used for monitoring and/or modulating neurophysiological activity in the peripheral or central nervous systems. As such, this broad range of devices offers tremendous opportunities to modulate pathologies affected by the nervous system, such as mood disorders, urinary incontinence, and chronic pain. Despite substantial advances in fabrication and interfacing technologies over recent years, the field still faces challenges related to long-term biocompatibility as well as open questions regarding the theoretical/mechanistic underpinnings of the therapeutic action of these interfaces. This Special Issue of *Micromachines* seeks to showcase research manuscripts and review articles that focus on novel technological, biological, and/or theoretical developments in implantable electrical or optical recording and stimulating neural interfaces. Specifically, the goal of this Special Issue will be to showcase research that addresses fundamental challenges facing the adoption of electrical and optical interfaces in either the peripheral or central nervous systems.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

 Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
