Fabrication and Application of Optoelectronics Based on Nanomaterials

Message from the Guest Editor

Optoelectronics is currently experiencing a revolution thanks to the development of nanomaterials, which have opened up previously unimaginable possibilities for the creation and use of high-tech devices with superior performance. Since the intrinsic properties of nanomaterials are strongly related to their size, shape and surface properties, special attention is needed for their controlled synthesis. Quantum dots (QDs) are a commonly used nanomaterial in optoelectronics. Strong confinement effects and tunable optical and electrical properties make them suitable candidates for solar cells and LEDs, among other uses. Halide perovskite has recently become a “Hot Cake” for optoelectronics device-based research. By leveraging the unique properties of nanomaterials, researchers and engineers can develop devices with improved performance, energy efficiency and functionality, which will impact various aspects of our daily lives. We look forward to your submissions!

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
