

Special Issue

Progress on Nanoparticles in Fluid Mechanics for Advancement of Micromachines

Message from the Guest Editor

The concept of formulating mono/hybrid nanofluids is not new to researchers. This idea has wide applications in the heat transfer mechanism, nanotechnology, advanced fluid flow and fluid mechanics, and in the manufacturing of several devices. Therefore, the practical significance of nanoparticles in working fluids is essential. This development mainly emphasizes the enhancement of thermophysical properties and the performance of the fluids in single- and multiphase flows. The same concept is highly appreciated in designing several industrial and mechanical engineering devices. For this Special Issue, we are looking to collect research articles from all the applied areas of nanofluids, especially in micromachines, heater exchangers, renewable energy, porous mediums and others, targeting the shape, size and volume fraction of nanoparticles. The focus should be on the type of material used in nanofluids' formulation, the fraction size of the nanoparticles, and the shape of the nanoparticles. Furthermore, all relevant sections of importance in terms of industrial and engineering related to the volume fraction, size and shape of nanoparticles in the formulation of nanofluids are

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
