Special Issue

MEMS Devices for Nanomanufacturing

Message from the Guest Editors

Dear colleagues, High-volume nanomanufacturing is a key technology driver crucial for the development of novel, high-performance, and low-cost miniaturized products with applications in several industries. However, materials development and quality control of production in nanoscale have been two of the most difficult challenges. Developing materials for nanoscale applications requires higher precision in the placement and manipulation of the material. In addition, nanomaterial requires a more detailed analysis to find defects and to perform quality control. These challenges can be effectively addressed with the development of application-specific MEMS and NEMS devices to fulfill the requirements of precision, scalability, process control, and metrology. For this Special Issue, we invite you to contribute to the design, development, production, and testing of nanomaterials using MEMS devices for nanomanufacturing. This special issue will cover the spectrum of the nanomanufacturing process flow from start to end, manufacturing process design, novel production methods, nanomaterial testing using MEMS devices.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu
Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
