Micro/Nanofabrication for Retinal Implants

Message from the Guest Editor

For a long time, many people have dreamed of restoring sight to blind individuals. For those blinded by outer retinal degenerative diseases (e.g., age-related macular degeneration and retinitis pigmentosa), retinal implants can evoke visual percepts by stimulating the inner retinal neurons that survive the diseases. Indeed, when microelectronic retinal prosthetic devices demonstrated promising clinical outcomes, it seemed like the dream had been realized. Unfortunately, the best visual performance restored by the prostheses is still far removed from the normal vision. For a significantly enhanced quality of restored vision, retinal implants require breakthroughs in their electrode designs, dimensions, materials, and so on, which would heavily rely on micro-/nano-fabrication technologies. Also, because of the nature of biomedical devices aiming for physiological function restoration, multidisciplinary endeavors are crucial; for example, a physiological and/or anatomical rationale would be ideal for new designs.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
