

Special Issue

Microfluidic Device Fabrication and Cell Manipulation

Message from the Guest Editor

Microfluidic devices have been used for biological cell manipulation and analyses for twenty years. Methods for device fabrication and cell-manipulation applications have a relationship with each other. Based on the improved spatial resolution and/or throughput which can be obtained through recent fabrication methods, new approaches to cell manipulation can be suggested. The necessity of cell handling leads to the design of novel microfluidic devices and the application of these devices in the biomedical field, especially in medical treatment, diagnosis, and environmental analyses for improved quality of life. This Special Issue collects developments in novel microfluidic device fabrication and applications for cell manipulation. Potential topics include, but are not limited to, cell and tissue culture, cell sorting, biomolecular analyses, sensing, systems biology, and cell handling for biomedical applications. Bacterial, fungal (including yeasts), insect, plant, and animal cells are potential subjects, but the Issue's scope is not limited to these.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
