Special Issue

Nanowires and Nanoprobes – Functionalized Arrays

Message from the Guest Editor

Nanowires not only represent one of the most important enabling technologies in electronics but have also lead to sensors with molecular scale sensitivity. This includes nanowire transistors and functionalized nanowire probes. We are calling for papers that highlight advances in nanowire research that may lead functional systems with an emphasis on detector arrays. As examples, we hope to gather articles that relate progress in the fabrication and utilization of arrays of nanowire transistor sensors and vertically oriented functional nanoprobes. The range of materials spans from Si and Ge to BN, metal oxides and carbon nanotubes. In recent research directed self-assembly has been utilized for device fabrication and functionalization. These platforms have exciting potential as electrical, chemical, optical, magnetic, and mechanical sensors that can provide highly sensitive spatial and temporal information about the systems being studied.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Nam-Trung Nguyen
Queensland Quantum and Advanced Technologies Research Institute, Griffith University, West Creek Road, Nathan, QLD 4111, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
