Special Issue

Network-on-Chip and Application

Message from the Guest Editors

Advancement in computing system architectures, coupled with the Moore's Law and Dennard scaling, has enabled system-on-a-chip (SoC) architects to accommodate hundreds of processing, memory, and other cores on a single chip. The network-on-a-chip (NoC) paradigm is based on packet-switched routing mechanism. It can address most of the on-chip communication problems, including performance limitations of long interconnects and the integration of many heterogeneous cores on a chip. However, NoC performance, hardware cost, and power consumption depend on its various parameters, such as topology, the number and depth of virtual channels, routing, and flow control mechanisms. The goal of this Special Issue is to assemble and put forward innovative ideas and solutions related to NoC architecture, design, implementation, and applications. Moreover, the NoCs for FPGAs, multi/many-core SoCs, and heterogeneous systems will also be explored. Researchers and developers are invited to submit their unpublished network-on-a-chip-related work. The extended versions of published papers in conferences, symposiums or workshops are also welcomed.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu
1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
