Special Issue

Micro/Nanofluidics Devices for Nucleic Acids and Cell Analysis

Message from the Guest Editors

Micro/nanofluidics technology, having the advantages of precise fluid control and minimal reagent use, integrates with nucleic acid to develop novel analytical devices, advancing new research hotspots. This has improved the diagnosis of infectious diseases, early cancer screening and treatment assessment. Moreover, microelectrode arrays combined with microfluidics have important application prospects in exploring the mechanisms of neurological diseases and the fields of drug screening, neural computing and organ chips. This Special Issue seeks to showcase the effective integration of micro/nanofluidic devices and nucleic acid testing methods. Particular attention will be paid to innovative applications that can improve upon existing medical devices and brain–machine interfaces. Also of interest is the development of micro/nanofluidic devices for nucleic acid analysis, which presents a great challenge as many steps, including cell or virus lysis, nucleic acid extraction and enrichment and nucleic acid amplification or detection signal amplification, must be accomplished by a sensitive, portable yet low-cost chip.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu
Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
