

Special Issue

Critical Materials and Components for High-Performance Magnetic Encoders in Robotics and Unmanned Systems

Message from the Guest Editor

Magnetic encoders are essential positioning devices for actuators and reducers in robotics and unmanned systems, valued for their compact size, robustness in adverse environments, low power consumption, etc. High-performance magnetic encoders, achieving high accuracy and rapid response, typically comprise hard magnets, sensors, and integrated circuitry. However, their performance is complex and highly dependent on the specific combination of materials and components used. This Special Issue aims to provide a platform for discussions on the design, fabrication, and testing of magnetic encoders, with a specific focus on the critical role of materials and components. We solicit contributions presenting research on magnetic encoders utilizing both commercial off-the-shelf and novel materials/components to achieve high performance. Application examples and application-oriented approaches aligned with industrial practices are also of central interest. We sincerely invite researchers in related fields to submit their manuscripts to this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
