Micro/Nanofabrication of Silicon Metal–Oxide–Semiconductor Devices

Message from the Guest Editors

The silicon metal–oxide–semiconductor (MOS) is the core structure of modern-day integrated circuit (IC) chips. Due to the demand for high-performance and high-density ICs, MOS devices have been continuously scaled down for the past five decades. However, the increasing miniaturisation will eventually hit fundamental limitations such as heat dissipation, scalability and, more prominently, the quantum mechanical effects. To overcome these issues, we should leverage on the quantum phenomenon to engineer MOS-based quantum devices. Such technology relies on the exploration of advanced micro- and nanofabrication technologies, processes, structures and new materials. As the semiconductor industries and foundries have been well developed for many decades, it is extremely beneficial to develop quantum technology based on silicon MOS fabrication processes, for instance, silicon quantum dots for quantum computing and single electron transistors for quantum metrology.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
