# Superconductors: Properties, Technology, and Applications

### Message from the Guest Editor

So far, the copper oxide (cuprate) superconductors hold the record for the highest superconducting transition temperature ( $T_c \sim 133$  K) among all superconductors in ambient pressure. Therefore, to obtain room temperature superconductivity, it is crucial to understand the mechanism of the superconductivity in the unconventional high temperature superconductors. Since 1958, when the BCS theory was developed, it has been known that in low- $T_c$  superconductors, the conducting electrons of the material are bound together in “Cooper pairs”, a lower energy state that permits electrical conduction with no resistance. The binding of the Cooper pairs is caused by a coupling between the electrons and the thermal vibrations of the atoms themselves, a complex many-body quantum effect called the electron–phonon interaction. However, the electron–phonon scattering mechanism cannot explain the Cooper pairing found in unconventional superconductors. The question is: what is the pairing mechanism in high- $T_c$  superconductors? Therefore, understanding the mechanism of all superconductors remains one of the most important topics in condensed matter physics.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
