Multi-Modal Microfluidics and Programmable Microfluidics for Biomedical Applications

Message from the Guest Editor

Multimodal microfluidics and reprogrammable technologies have become popular in the BioMEMS community for biomedical studies, including but not limited to point-of-care (POC) techniques.

Reprogrammable microfluidics have contributed to synthetic biology topics, involving biomedical studies, such as physiology studies from single-cell to tissue level. Advanced BioMEMS techniques, especially programmable and reprogrammable modules in microfluidics, are utilized to build artificial cells, or rearrange living cells, or engineered cells to achieve bioinformatics and biocomputing functions, or to build miniaturized experimental platforms for biomedical applications. The integration of multimodal microfluidics and reprogrammable microfluidics usually involves multiple advanced biofabrication processes, such as stereolithography, additive manufacturing for 3D microfluidics, programmable and reprogrammable microfluidics, single-cell or cell cluster patterning, cellular level or subcellular level biosensing, in vitro organ-on-a-chip models, synthetic-biology-associated techniques, smart device interfaces, and processes assisted by machine learning or artificial intelligence.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2025).
