Special Issue

Micro and Nanoflowrates Measurements

Message from the Guest Editors

Dear Colleagues The last two decades have witnessed a rapid development of MEMS involving liquid and gas microflows in a wide range of applications. The metrological characterization of such microflows is still a real challenge for the scientists who have to develop innovative experimental techniques and methods able to measure, with a good accuracy, micro and nanoflow rates lower than the resolution of usual sensors. This Special Issue therefore seeks to showcase recent advances in flowrate measurement techniques, fundamental studies, and applications of micro flowrate measurements regarding both the performance (including stability, reliability, accuracy) of active systems, i.e., macro-, mini- and microdevices delivering micro flowrates, and the associated challenges in the characterization of fluid flows inside passive microsystems. The covered topics include but are not limited to the development of innovative measurement techniques, flowrate sensors or metrological tools for evaluating micro flowrates as well as methods, testing protocols, calibration techniques, and development of new standards. We look forward to receiving your submissions!

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
