

Special Issue

Novel Thermoelectric Materials and Devices and Related Micro- and Nanotechnology

Message from the Guest Editors

To overcome the coming energy crisis, exploring sustainable and eco-friendly energy resources have shown considerable significance. Thermoelectric is considered to be a sustainable solution to meet global energy challenges by harvesting electricity from waste heat, and has therefore become of interest in recent years. The aim of this Special Issue is to publish significant developments in the area of thermoelectrics based on advanced thermoelectric techniques, including state-of-art synthesis approaches, computational achievements, and advanced characterization techniques of the principles of both structures and materials. Furthermore, this Special Issue also focuses on advanced micro- and nanotechnology for fabricating thermoelectric devices with novel designs for various applications with a high performance and stability, such as miniature device assembling and flexible/wearable thermoelectric generators. It will act as a critical platform for thermoelectrics, and in particular establish an intrinsic link between these newly developed strategies and the outstanding performance achieved.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
