Airborne Microbial Communities

Guest Editors:

Prof. Dr. Daisuke Tanaka

Faculty of Science, Academic Assembly, University of Toyama, 3190 Gofuku, Toyama 930-8555, Japan

Prof. Dr. Fumito Maruyama

Center for the Planetary Health and Innovation Science (PHIS), The IDEC Institute, Hiroshima University, 1-3-2 Kagamiyama, Higashi-Hiroshima City 739-8511, Hiroshima, Japan

Dr. Milko A. Jorquera

Department of Chemical Science and Environmental Resources, La Frontera University, Temuco 4811-230, Chile

Deadline for manuscript submissions:

15 July 2024

Message from the Guest Editors

This Special Issue aims to elucidate the complex dynamics and implications of airborne microbial communities, encompassing a spectrum of organisms such as bacteria, fungi, algae, archaea, and viruses. The influence of these airborne microbes is multifaceted, extending to human and animal health, agricultural productivity, ecosystem stability, and climatic processes. Current research underscores the variation in outdoor airborne microbial communities as a function of seasonal changes. geographic variability, and air pollution levels. Additionally, the composition of indoor microbial communities is influenced by a variety of factors including ambient temperature, humidity levels, ventilation occupant density, and the influx of microbes from outdoor environments. The objective of this Special Issue is to showcase cutting-edge research that advances our understanding of the composition, diversity, abundance of microbial communities in the air, as well as their impacts. We welcome original research articles. comprehensive review papers, and succinct communications that contribute to the knowledge of monitoring, managing, and mitigating airborne microbial communities

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Systems Biology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC,

PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology (medical))
