Message from the Guest Editor

Dear Colleagues,

This Issue will compile the knowledge that we have accumulated so far (reviews), and will expand it (research articles) to further our understanding of the protein–RNA interactions in virus-infected cells that either drive the antiviral response or suppresses it. This Issue has the following two major focuses:

- **RBP as critical weapons in the antiviral arsenal of the host cell.** This section will expand our knowledge of the roles of cellular RBPs as sensors and effectors of the innate immunity system;
- **Viral RBPs that interfere with the antiviral response.** This section will focus on the viral RBPs that interfere with host gene expression, or prevent the detection of the viral RNA by antiviral sensors, to impair the capacity of the cell to respond to virus infection.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
