Studies, University of Tasmania,  
Locked Bag 1370, Launceston,  
Tasmania 7250, Australia

Deadline for manuscript  
submissions:

**closed (31 March 2021)**

### Message from the Guest Editors

In this Special Issue, we welcome original research or review papers that present novel findings on amoebic gill disease.

Potential topics include, but are not limited to:

- a) amoebae causing gill infections;
- b) host–parasite interactions in amoebic gill disease;
- b) epidemiology and risk factors for outbreaks of amoebic gill disease;
- c) development of experimental vaccines or treatments to control amoebic gill disease.

In this Special Issue, we hope to present new knowledge within the area of amoebic gill disease. A collection of high-impact articles on this subject may raise awareness about this important problem in farmed fish and contribute new fundamental and applied knowledge to help us further understand and combat this disease.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
