**Message from the Guest Editors**

As research in disciplines including soil and water quality, and sustainability of soil and other resources, continues to advance, the contribution of freshwater wetland soils and their microorganisms to these disciplines should not be overlooked. Microorganisms of freshwater wetland soils impact ecosystem services; water quality; biogeochemical cycling of C, N, and P; and greenhouse gas emissions in many terrestrial environments. There is a need for more information about freshwater wetland soil microorganisms, their attendant biogeochemical and other activities, and their relationships to the plants and animals they associate with, to help us better understand wetland soil biology/microbiology, to conserve wetland resources, and to better plan and implement agricultural and other practices on the terrestrial landscape.

Message from the Editor-in-Chief

“Microorganism” merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (SCIE - Web of Science), BIOSIS Previews (Web of Science) and other databases. Citations available in PubMed, full-text archived in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 21.2 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the second half of 2018).
