

# Special Issue

## Human Skin Microbiota, 2nd Edition

### Message from the Guest Editors

The objective of this Special Issue of *Microorganisms* is to present latest research regarding the human skin microbiota in health and disease and insights into the microbiology and genomics of individual skin microorganisms. This also includes technical procedures and exploratory studies to investigate the composition and function of the skin microbiome. In addition, this Special Issue aims to present research regarding health-beneficial and -detrimental effects of the skin microbiota and the possible exploitation and modulation for skin barrier-protective therapeutic strategies, including pre- and probiotic solutions. Original research articles, as well as review articles, are invited.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
