Special Issue

Hepatitis E Virus (HEV) and Other Hepeviridae

Message from the Guest Editors

Hepatitis E Virus is one the five viruses reported worldwide that are considered to be primarily hepatotropic. It is associated with widespread viral hepatitis outbreaks and with severe cases in pregnant women. It is classified in the family *Hepeviridae* that includes two subfamilies, five genera, and ten species that infect fishes, mammals, and birds. Human HEV is classified in the *Orthohepevirinae* subfamily, and some of these viruses also infect other mammalian species, such as pigs, wild boars, deer, and camels, and can be considered zoonotic. These viruses can be detected via different serological and molecular ways. The aim of this Special Issue is to analyze the presence of human and animal infections by viruses belonging to the family *Hepeviridae,* analyze the different methodologies used for their detection, and use phylodynamics methodologies to analyze their distribution around the world and possible transmission routes. Original papers and reviews dealing with viruses belonging to this family dealing with virological aspects, new hosts species, and new human or animal populations infected with them will be welcomed.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
