Chemolithotrophic Microorganisms

Message from the Guest Editor

Chemoautotrophic microorganisms are widely distributed in natural and manmade ecosystems. They not only drive the element biogeochemical cycles on Earth, but also play important roles in bioremediation. Though some meta-omic technologies are now popularly used to obtain their genomes or predict their functions at the genomic and transcriptomic scales, studies at the cellular level and in pure culture are also essential to reveal the pathways involved in the biogeochemical cycles and screen some excellent strains for the bioremediation of pollutants in the environment.

The aim of this Special Issue is to collect some of the latest works in the field of chemoautotrophic microorganisms. It welcomes studies on (1) the enrichment, isolation, and characterization of chemoautotrophs; (2) (meta)genomic-, (meta)transcriptomic-, and/or (meta)proteomic-scale-based functional analyses of chemoautotrophs; (3) microbial interactions between chemoautotrophs and other microbes; and (4) the strategies or methods that are optimized to obtain chemoautotrophs from the environment.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Toxicology, UFZ-Helmholtz Centre for
Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
